SYLLABUS OF RECORD

I. Catalog Description

SDR 331 Interaction of Ionizing Radiation

2 class hours

2 lab hours

3 credit hours

(2c-2l-3cr)

Prerequisites: SDR 231 and permission of instructor and local, state or federal agency/organization authorization.

Level 3 nuclear physics designed to provide the apprentice level first responders with the knowledge, skills, and abilities necessary to identify the radiation hazards at an incident site that involves the radiological or nuclear weapons of mass destruction. Focuses on radiation detection and provides students with the ability to conduct the sampling, evaluation, detection, projection, and control of radiological hazards. Gamma ray spectroscopy systems are used in data acquisition and analysis in the laboratory.

II. Course Objectives

Students successfully completing this course will be able to

- 1. Identify the need for radiation detection instruments.
- 2. Identify types of radiation measurement instruments.
- 3. Identify types of radiation detection instruments.
- 4. Explain the use of gamma ray spectroscopy.
- 5. Determine the isotope that produced the radiation from an accident site.
- 6. Analyze the spectra data collected in gamma spectrometer system and identify unknown isotopes present with a FieldSPEC and ISOCART system.

III. Course Outline

Lecture (28 total hours)

- A. Introduction (3 hours)
 - 1. Radiation Incidents at various sites
- B. Radiation Survey Meters (4 hours)
 - 1. Ionization Chamber Instruments
 - 2. Geiger Counters
 - 3. AN/PDR-77 and AN/VDR-2
 - 4. Units for Measuring Radiation
 - a) Half-Life and Activity
 - b) Radiation Exposure
 - c) Absorbed Dose
 - d) Dose Equivalent
- C. Radiation Detector (6 hours)
 - a) Types of Detectors and their Principles of Detection
 - b) Ionization Counters
 - c) Scintillation Counters
 - d) Solid-State Diode Detectors
 - e) Sodium Iodide (NaI (Tl)) Detector
 - f) Germanium (Semiconductor type) Detector
 - g) Gamma Interactions with Matter
 - a) Photoelectric effect
 - b) Compton scattering interaction
 - c) Pair production

Exam 1 (1 hour)

- D. Gamma Ray Spectroscopy (6 hours)
 - Functions of Spectrometer and its Principles of Operation (FieldSpec and ISOCART)
 - 2. Energy Calibration
 - 3. Efficiency Determination

- 4. Sources of background spectra
 - a). Sources in their Natural Environment (NORM)
 - b). Sources in an Artificial Environment (or TENORM)
- E. Identification Of Radioactive Materials From Gamma Ray Spectra (8 hours)
 - 1. Decay series
 - 2. Gamma-ray branching ratio
 - 3. Determination of the nuclear levels of isotopes from the photo peaks from a gamma-ray system.
 - 4. Determination of the intensity of photo-peaks in a gamma-ray spectra
 - 5. Identification of the isotopes and its parents and origins of the source found in background (natural) and man-made ones.
 - o U-238 series
 - o U-235
 - o Th-232
 - o K-40
 - o Cs-137, Co-60, Ra-226, Am-241 & Pu-239

Exam 2 (During Final Exam Week or end of course depending on mode of delivery) (1 hour)

Laboratory (Practical Exercise) (28 total hours)

- F. Identification of Unknown Radioactive Substances and Their Origins lab (26 hours)
 - 1. Gamma Energy Calibration
 - 2. Identification of Unknown Gamma Sources
 - 3. Efficiency of a NaI(Tl) Detector
 - 4. Energy Resolution of the NaI(Tl) detector for the ¹³⁷Cs photo-peak
 - 5. Sample Spectra from various sources
 - 6. Search Gamma (or X) Energies for Nuclide Identification
- G. Capstone Event (2 hours)

IV. Evaluation Methods

Evaluation methods and percent weights of overall grade are the following:

Written Exam (50 points)

Two comprehensive problem-solving examinations are given at the end of each section. Scenario-based questions are also included, where student must demonstrate the ability to identify and quantify the radioisotopes from gamma ray spectra.

Laboratory Component (25 points)

Students write laboratory reports, which include experimental observations, analysis and calculations, and conclusions. Laboratory experiments focus on radiation detection and identification, determination of activities, and evaluation of radiological hazards.

Capstone Event (25 points)

The capstone event is a simulation of a real-life incident involving WMD. Students will be evaluated on their ability to assess an "incident site" for possible unknown radioactive hazards, identify the radioisotopes involved and assess radiation hazards associated with the radiation source, and conduct the proper response call.

Your overall grade will be calculated based on a total point score of 100:

90 - 100 A 80 - 89 B 70 - 79 C 60 - 69 D < 60 F

V. Attendance Policy

Attendance in both lecture and laboratory is expected of all students in the class. The policy is governed by university rules and regulations. The students are strongly encouraged to attend all classes.

VI. Required Textbooks, Supplemental Books and Readings

Required textbook:

Wijekumar, V., Weapons of Mass Destruction-Response Element Advanced Laboratory Integrated Training Indoctrination (WMD-REALITI) Level 3 Radiological Module (Interaction of Ionizing Radiation). (Revised December 2003).

Supplemental Books:

J. Kenneth Shultis and Richard E. Faw, Fundamentals Nuclear Science and Engineering, Marcel Dekker, Inc., 2002.

Herman Cember, Introduction to Health Physics, Third Edition, McGraw Hill, 1996.

K.S. Krane, Introductory Nuclear Physics, J. Wiley & Sons, 1988.

R.B. Firestone, Table of Isotopes, Volumes I & II, Eighth Edition, J. Wiley & Sons, 1999.

VII. Special Resource Requirements

None

VIII. Bibliography

Due to declining enrollments and investment in the past ten years in nuclear physics and nuclear engineering programs, current textbooks are hard to find with an exception of a few.

- 1. Cember, H. *Introduction to Health Physics*, 3rd Ed.; McGraw-Hill (HP division): New York, 1996.
- Conway, K. C. Low Energy Gamma Spectrometer NaI (Tl) Verification of Building Surface Final Survey For Free release For Unrestricted Use Data, WM'00 Conference, Feb 27-March 2, 2000, Tucson, AZ.

- 3. Gloyna, E. F.; Ledbetter J. O. *Principles of Radiological Health*; Marcel Dekker, Inc.: New York, 1969.
- 4. Richardson, H. D., *Industrial Radiography Manual*; U.S. Government Printing Office, Washington, 1968.
- 5. Radiation Protection and Emergency Response (http://www.nrc.gov/).
- 6. Shultis K. J., and Faw R. E. Fundamentals of Nuclear Science and Engineering; Marcel Dekker Inc.: New York, 2002.

COURSE ANALYSIS QUESTIONNAIRE

Section A: Details of the Course

A1. How does this course fit into the programs of the department? For which students is the course designed? (majors, students in other majors, liberal studies). Explain why this content cannot be incorporated into an existing course.

This course is one of the controlled electives for students in the BS in natural science with an SDR concentration. It is not intended to be a Liberal Studies course. This course is designed for first responders – the emergency personnel who respond to any suspected incident of a chemical, biological, radiological and or nuclear nature. The content and the intense material coverage are too large to be incorporated in to an existing course such as nuclear physics 472 or radiological health 462.

A2. Does this course require changes in the content of existing courses or requirements for a program? If catalog descriptions of other courses or department programs must be changed as a result of the adoption of this course, please submit as separate proposals all other changes in courses and/or program requirements.

This course does not require changes in any other course in the department. A new track (Science of Disaster Response) of the existing program of the BS in Natural Science will include this course among the controlled electives.

A3. Has this course ever been offered at IUP on a trial basis (e.g. as a special topic) If so, explain the details of the offering (semester/year and number of students).

A pilot of an eleven-day WMD-REALITI Chemical, Biological, Radiological and Nuclear Apprentice Level course was run in August 2002 for 22 students. The course received outstanding evaluations from both students and the government personnel present. In fact, it is because of the reception that the pilot courses received that IUP was approached and asked to design an entire degree program for first responders.

A4. Is this course to be a dual-level course? If so, please note that the graduate approval occurs after the undergraduate.

This course is not a dual level course.

A5. If this course may be taken for variable credit, what criteria will be used to relate the credits to the learning experience of each student? Who will make this determination and by what procedures?

This course is not to be taken for variable credit.

A6. Do other higher education institutions currently offer this course? If so, please list examples (institution, course title).

To the best of our knowledge, this course and its intended degree program are unique in the United States. This lack of specific scientific education for emergency first responders at an accredited institution was one of the primary motivating factors for the National Guard Bureau (NGB) to approach IUP to develop this course.

A7. Is the content, or are the skills, of the proposed course recommended or required by a professional society, accrediting authority, law or other external agency? If so, please provide documentation.

The request for the creation of this course came from the Department of Defense. Weapons of Mass Destruction-Response Element Advanced Laboratory Integrated Training and Indoctrination (WMD-REALITI) Program. Project.Subcontract Number: 020500055.Funded by Concurrent Technologies Corporation for \$441,445.

Section B: Interdisciplinary Implications

B1. Will this course be taught by instructors from more than one department or team taught within the department? If so, explain the teaching plan, its rationale, and how the team will adhere to the syllabus of record.

This course will be taught by one instructor.

B2. What is the relationship between the content of this course and the content of courses offered by other departments? Summarize your discussions (with other departments) concerning the proposed changes and indicate how any conflicts have been resolved. Please attach relevant memoranda from these departments that clarify their attitudes toward the proposed change(s).

The intended audience of SDR 331 may require intensive delivery and specific educational objectives that are not met by existing IUP courses.

B3. Will this course be cross-listed with other departments? If so, please summarize the department representatives' discussions concerning the course and indicate how consistency will be maintained across departments.

This course is not cross-listed.

B4. Will seats in this course be made available to students in the School of Continuing Education?

Only if the Continuing Education students have been accepted in the SDR program.

Section C: Implementation

C1. Are faculty resources adequate? If you are not requesting or have not been authorized to hire additional faculty, demonstrate how this course will fit into the schedule(s) of current faculty. What will be taught less frequently or in fewer sections to make this possible? Please specify how preparation and equated workload will be assigned for this course.

Yes, faculty resources are adequate because of external funding. If no external funding is available, then additional faculty resources will be required. This course will be counted as one preparation and four hours of equated workload. Each contact hour in laboratories in chemistry, biology, and physics is assigned one (1) workload hour, so 2c + 2l = 4 workload hours.

The faculty credentials include possession of a Ph.D. in experimental nuclear physics and a

minimum of five years teaching experience, balanced with three to five years of professional

work experience in the following areas, skill sets, and certificates. The qualified faculty member

will have experience in nuclear radiation detection, nuclear physics, radiology, health physics

and holds a certificate in Radiation Safety accepted by the Nuclear Regulatory Commission. . In

addition, the faculty should have at least five years of training at a facility using radioactive

materials and radiation-producing machines.

C2. What other resources will be needed to teach this course and how adequate are the current

resources? If not adequate, what plans exist for achieving adequacy? Reply in terms of the

following:

*Space

*Equipment

*Laboratory Supplies and other Consumable Goods

*Library Materials

*Travel Funds

Space: For academic year 2002/2003, Weyandt Hall will suffice, but future offerings will

require a separate facility. The Department of Defense is covering the cost of this

facility.

Equipment: Specialized equipment, including scintillation detectors, photo-multiplier

tubes, gas-filled detectors, Geiger-Muller counters, and gamma spectrometers equipped

with FieldSPEC NaI detector system and ISOCART Germanium detector system, is

provided by the DoD through the WMD-REALITI grant.

<u>Laboratory Supplies</u>: Laboratory supplies are provided by the DoD through the WMD-

REALITI grant.

<u>Library</u>: Concurrent Technologies Corporation (CTC), on behalf of the NGB, has

packaged materials needed by the students. Additional materials will be available on-

line.

<u>Travel Funds</u>: not applicable

258

C3. Are any of the resources for this course funded by a grant? If so, what provisions have been made to continue support for this course once the grant has expired? (Attach letters of support from Dean, Provost, etc.)

Yes. The DOD/NGB grant is expected to continue for several years.

C4. How frequently do you expect this course to be offered? Is this course particularly designed for or restricted to certain seasonal semesters?

We expect this course to be offered every Fall semester depending on student demand and faculty availability.

C5. How many sections of this course do you anticipate offering in any single semester?

One section will be offered at a time.

C6. How many students do you plan to accommodate in a section of this course? What is the justification for this planned number of students?

A maximum of 24 students can be accommodated in this class in which students do a considerable amount of laboratory work which limits the enrollment.

C7. Does any professional society recommend enrollment limits or parameters for a course of this nature? If they do, please quote from the appropriate documents.

No professional society recommends enrollment limits or parameters for this course.

C8. If this course is a distance education course, see the Implementation of Distance Education Agreement and the Undergraduate Distance Education Review Form in Appendix D and respond to the questions listed.

This course is not a distance education course.

Section D: Miscellaneous

Include any additional information valuable to those reviewing this new course proposal.

No additional information is necessary.
